Art Unit: 2162

### **DETAILED ACTION**

1. This office action is in response to the Request for consideration filed on March 02, 2007, in which claims 19-36 are presented for further examination.

### Response to Arguments

2. Applicant's arguments filed March 02, 2007 have been fully considered but they are not persuasive. (see Examiner's remark).

### Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 5. Claims 19-36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Olivier US Patent no. 6,480,885 and Ogilvie et al., (hereinafter "Ogilvie") US Patent no.6,324,569.

Art Unit: 2162

As to claim 19, Olivier discloses an analogous system that enables users to exchange group electronic mail by establishing profiles and criteria for determining personalized subsets within a group by comparing the identified appearing on the allowed list to determine whether each designated recipient is on the list for the intended recipient that stored on the database of the email manager (col.17, lines 7-12). In particular, Olivier stated that if the message is not approved, the sender is notified by the system (col.14, line 56-col.15, line 15). Although, Olivier does not explicitly discloses the use of notifying the recipient if a message is unapproved. Olivier, however, stated when someone responds to a message via their email client's reply all feature, the message is addressed back to that to header field, including the encoded unique ID is extracted from the email address and it then uses the stored distribution list associated with the unique ID, rather than the sender's distribution list, so the system would automatically checking the recipient's message acceptance and unapproval criteria data. Olivier also allows the sender to modify the setting when sending a message. Such teaching of Olivier has the functional limitation of sending a notification to the recipient when a message is unapproved with respect to the message criteria data set by the sender. Once the notification is set by Olivier in the message criteria data, the recipient will automatically receives an acknowledgement as to whether a message is approved or not (see Olivier col. 16, lines 25-62). Ogilvie, on the other hand, discloses an analogous system for "notifying the recipient if a message is unapproved" as a means of providing the recipient with the capability to manage unsolicited email messages without the messages inadvertently removed by a message filter, and also requesting to remove from the mailing list (col.1, lines 55-64; col.14, lines 26-39). The system of Ogilvie has the capability, both, of not requiring that recipients affirmatively remove unwanted email or create a

Art Unit: 2162

reply message having remove in the subject to indicate their lack of interest in the subject matter

(col.11, lines 1-6) and determining whether they contain any self removing message indicators

from message originators then automatically notifying the recipient according to the instruction

of the replacement message (col.13, lines 1-5; col.14, lines 28-39). Therefore, it would have been

obvious to one of ordinary skill in the art of data processing, at the time the present invention

was made to combine the teachings of the cited references, wherein the message distribution

provided therein (See Olivier's fig.10 (2)) would incorporate the use of notifying the recipient if

the message is unapproved (unsolicited), in the same conventional manner as disclosed by

Ogilvie (col.1, lines 55-64; col.13, lines 1-5; col.14, lines 28-39). One having ordinary skill in

the art would have been motivated to utilize such a combination would provide Olivier's system

the enhanced capability of managing unsolicited email messages without the messages

inadvertently removed by a message filter, thereby reducing the inconvenience of unsolicited

email by making it possible for officials to present messages that do not have to be manually

removed by the recipient.

As claim 20, Olivier and Ogilvie disclose substantially the invention as claimed. In addition

Ogilvie discloses the claimed "allowing the recipient to view an unapproved message" as a

means of providing the recipient with the capability to manage unsolicited email messages

without the messages inadvertently removed by a message filter, and also requesting to remove

from the mailing list (col.1, lines 55-64; col.14, lines 26-39).

Art Unit: 2162

As to claim 21, Olivier and Ogilvie disclose substantially the invention as claimed. Olivier, however does not explicitly disclose the claimed notifying the recipient with a notification message having a link to network data representing a list of unapproved. Ogilvie, on the other hand, discloses an analogous system for providing email message originator and distributors with default control over message removal at a message recipient's location, regardless of whether the message has been opened. In particular, Ogilvie discloses the claimed feature "notifying the recipient if a message is unapproved" as a means of providing the recipient with the capability to manage unsolicited email messages without the messages inadvertently removed by a message filter, and also requesting to remove from the mailing list (col.1, lines 55-64; col.14, lines 26-39). Ogilvie, also transfers the burden from the recipient to the system by automatically removing unsolicited email message before or after being displayed. The system of Ogilvie has the capability, both, of not requiring that recipients affirmatively remove unwanted email or create a reply message having remove in the subject to indicate their lack of interest in the subject matter (col.11, lines 1-6) and determining whether they contain any self removing message indicators from message originators then automatically notifying the recipient according to the instruction of the replacement message (col.13, lines 1-5; col.14, lines 28-39). Therefore, it would have been obvious to one of ordinary skill in the art of data processing, at the time the present invention was made to combine the teachings of the cited references, wherein the message distribution provided therein (See Olivier's fig.10(2)) would incorporate the use of notifying the recipient if the message is unapproved (unsolicited), in the same conventional manner as disclosed by Ogilvie (col.1, lines 55-64; col.13, lines 1-5; col.14, lines 28-39). One having ordinary skill in the art would have been motivated to utilize such a combination would provide Olivier's system

Art Unit: 2162

the enhanced capability of managing unsolicited email messages without the messages

inadvertently removed by a message filter, thereby reducing the inconvenience of unsolicited

email by making it possible for officials to present messages that do not have to be manually

removed by the recipient.

As to claim 22, Since Olivier discloses a web browser plug-ins and other new technology that

allow the exchanged messages to be stored somewhere other than the currently viewed web site,

retrieve messages from the independent data store and displayed to the user and use an address of

a specific page being viewed within the web site (col.25, lines 25-41), the claimed wherein the

network data comprises markup language data accessible by a computer device of the recipient is

met.

As to claim 23, Olivier discloses the claimed allowing the recipient to set criteria to determine if

the message is approved (col.14, line 55-col.16, line 15; col.17, lines 7-21).

As to claim 24, Olivier discloses the claimed wherein the criteria include a sender of the message

being on a stored approved list for the recipient (col.14, line 55-col.16, line 15; col.17, lines 7-

21).

As to claim 25, Olivier discloses the claimed allowing the recipient to change the criteria (col. 17,

line 65-col.18, line 4).

Art Unit: 2162

As to claims 26-27, Olivier discloses the claimed notifying a sender of the unapproved message

of deletion of the unapproved message (col.14, lines 56-58; col.15, lines 4-14).

As to claim 28, Olivier discloses the claimed wherein the message and the criteria are stored on

an electronic message server (col.5, lines 5-45).

As to claims 29-32:

Claims 29-32 are computer system performing by the method of claims 19-28 above. They are,

therefore, under the same rationale. In addition, Ogilvie discloses the use of storing and sending

a notification to the recipient of unapproved message (col.1, lines 46-53); an access server for

generating a display page with a list of unapproved message (col.5, lines 6-45); wherein the list

of unapproved messages includes links to the unapproved message respectively and which on

selection causes transmission of an unapproved message to a recipient's computer device for

viewing by the recipient" (col.1, lines 55-65; col.14, line 26-38).

As to claim 33, Olivier discloses the claimed wherein the criteria include the sender of a message

being on an approved list for the recipient stored on the system (col.14, line 55-col.15, line 15).

Art Unit: 2162

As to claims 34-35, Olivier discloses the claimed wherein the display page includes a link to at least one display page for displaying and changing the criteria ((col.17, line 65-col.18, line 4).

### Remark

"Notifying the Recipient If the Message is Unapproved". Applicant also submitted that 6. Ogilvie, having prior art status in pertinent part, neither teaches nor suggests the above-recited feature of the claimed invention. The examiner disagrees with precedent assertion. It is noted, however, that the provisional application no. 60/14,138 filed on October 14, 1998 stated, however, that any reply to some unsolicited email would simply confirm that the address to which the unsolicited mail was sent is "good" and that a reply asking to be removed from the mailing list may therefore have the opposite effect, in that addresses from which no reply is received are eventually removed from the list. The self-removing email file's self-removal property as disclosed by the provisional application no. 60/14,138 can be expressly overridden by the sender, by the recipient, by an intervening authority such as an ISP or an authorized government agency, or by some combination of these. So the possibility of a reply is an explicit option presented to the user allowing the user to request removal as it was notify as whether the message is approved or unapproved (page 4, lines 5-15). On the other hand, the provisional Application no. 60/101,517 filed on September 23, 1998, stated that the email message does not initially delete itself after displaying the message. Instead, allowing the email message to be modified based on the notification request by the recipient (page 10, lines 1-2; and page 12, lines 1-4). Therefore, the limitation that Applicant is relied upon is supported by the provisional application detailed above.

Art Unit: 2162

#### Conclusion

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jean M. Corrielus whose telephone number is (571) 272-4032. The examiner can normally be reached on 10 hours shift.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Breene can be reached on (571) 272-4107. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) of 571-272-1000.
